Product Bin and Labeling Definitions

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheet. For this reason, Lumileds bins components for luminous flux or radiometric power, color point, peak or dominant wavelength and forward voltage.

LUXEON FX2-L Plus PC-Amber emitters are labeled using a 3-digit alphanumeric CAT code following the format below:

A B C

Where:

- A** – designates luminous flux bin (example: M = 270 to 280 lumens)
- B** – designates color bin (example: A = color bin A)
- C** – designates forward voltage bin (example: B = 2.90 V to 3.20 V)

Therefore, a LUXEON FX2-L Plus PC-Amber with a lumen range of 270 to 280 lumens, color code A and a forward voltage of 2.90 V to 3.20 V has the following CAT code:

M A B

Luminous Flux Bins

Table 5 lists the standard luminous flux bins for LUXEON FX2-L Plus PC-Amber emitters. Although several bins are outlined, product availability in a particular bin varies by production run and by product performance
