

LUXEON HL2Z

High Flux Density in a Proven Package for Precise Optical Control

LUXEON HL2Z is a 2mm square CSP-based, high power, un-domed emitter designed to provide leading flux density, superior color consistency, high luminance, and extreme flexibility in lighting solutions.

LUXEON HL2Z emitters are an ideal choice for fast time-to-market due to their ease of design-in, and their ability to lower system costs through improved performance while delivering the quality of light that is desired by lighting system designers and users.

FEATURES AND BENEFITS

Undomed source makes it easier to increase optical efficiency and to realize narrow beam angles.

CSP die technology enables close packing of the LEDs, high efficacy, and high drive current capability, in unique applications

Reliable and proven color consistency support high quality illumination, inside and outside

DLC R9 enabled to offer best-in-class color quality for luminaires

PRIMARY APPLICATIONS

High Bay

Low Bay

Torch

Head Lamps

Wall Grazer

Wall Wash

General Product Information

Product Test Conditions

LUXEON HL2Z LEDs are tested and binned with a DC drive current of 700mA, at a junction temperature, T_j , of 85°C.

Part Number Nomenclature

Part numbers for LUXEON HL2Z follow the convention below:

L 1 H Z – **A A B B** 2 z z z z z z z z

Where:

- A A** – any alphanumeric character that designates nominal ANSI CCT (for example, 27=2700K, 30=3000K, 35=3500K, 40=4000K, 50=5000K, 57=5700K, 65=6500K)
- B B** – any alphanumeric character that designates minimum CRI (for example, 70=70CRI, 80=80CRI, 90=90CRI)
- z** – any alphanumeric character that designates performance options (for example, 0=standard)
- zzzz zzzz – designates option codes for custom/bins/etc.

Therefore, the following part number is used for a LUXEON HL2Z 3000K 70CRI LED:

L 1 H Z – **3 0 7 0** 2 0 0 0 0 0 0 0 0

Note: All LUXEON HL2Z Parts are binned for meeting R9 specifications unless otherwise specified.

Lumen Maintenance

Please contact your local Sales Representative or Lumileds Technical Solutions Manager for more information about the long-term performance of this product.

Environmental Compliance

Lumileds LLC is committed to providing environmentally friendly products to the solid-state lighting market. LUXEON HL2Z is compliant to the European Union directives on the restriction of hazardous substances in electronic equipment, namely the RoHS Directive 2011/65/EU and REACH Regulation (EC) 1907/2006. Lumileds LLC will not intentionally add the following restricted materials to its products: lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE).

Soldering Temperature	JEDEC 020c 260°C
Allowable Reflow Cycles	3
Reverse Voltage ^[4] (V _{reverse})	LUXEON LEDs are not designed to be driven in reverse bias

Notes for Table 4:

1. Proper current derating must be observed to maintain the junction temperature below the maximum allowable junction temperature.
2. Residual periodic variations due to power conversion from alternating current (AC) to direct current (DC), also called "ripple," with frequencies ≥100Hz and amplitude ≤15% of the maximum allowable DC forward current are acceptable, assuming the average current throughout each cycle does not exceed the maximum allowable DC forward current at the corresponding maximum junction temperature.
3. Pulsed operation with a peak drive current equal to the stated peak pulsed forward current is acceptable if the pulse on-time is ≤5ms per cycle and the duty cycle is ≤50%.
4. Transient reverse voltages and surge currents due to electrical switching or supply interruptions are acceptable if these events do not last for more than 10ms, the amplitude of the reverse voltage does not exceed 5V and the reverse current is less than 220uA.
5. For torch application with portable battery source, maximum surge transient current during the initial turn-on is 3.5A for 180ms and thereafter not to exceed DC maximum rating current and LED junction temperature.

Product Bin and Labeling Definitions

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheet. For this reason, Lumileds bins LED components for luminous flux or radiometric power, color point, peak or dominant wavelength and forward voltage.

LUXEON HL2Z LEDs are labeled using a 4-digit alphanumeric CAT code following the format below:

A B C D

Where:

- A** – designates luminous flux bin (example: V=290 to 300 lm, W=300 to 310 lm)
- B** – designates color bin (example: 1=6500K, 2=5700K, 3=5000K, 5=4000K, 7=3000K, 8=2700K)
- C** – designates color space (example: 5/A/B/C/D=5-step MacAdam ellipse, 3=3-step MacAdam ellips)
- D** – designates forward voltage bin (example: X=2.65 to 2.85V, Y=2.85 to 3.00V)

Therefore, a LUXEON HL2Z 3000K 70CRI with a lumen range of 290 to 300 lm, color bin of 75 and a forward voltage range of 2.65 to 2.85V has the following CAT code:

V 7 5 X

Luminous Flux Bins

Table 5 lists the standard luminous flux bins for LUXEON HL2Z emitters. Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all CCTs.

About Lumileds

Companies developing automotive, mobile, IoT and illumination lighting applications need a partner who can collaborate with them to push the boundaries of light. With over 100 years of inventions and industry firsts, Lumileds is a global lighting solutions company that helps customers around the world deliver differentiated solutions to gain and maintain a competitive edge. As the inventor of Xenon technology, a pioneer in halogen lighting and the leader in high performance LEDs, Lumileds builds innovation, quality and reliability into its technology, products and every customer engagement. Together with its customers, Lumileds is making the world better, safer, more beautiful—with light.
