## Absolute Ratings

Table 4. Absolute ratings for LUXEON Versat 2020 140 AM

PARAMETER	PERFORMANCE
Minimum DC Forward Current	5 mA
Maximum DC Forward Current	200 mA
Maximum Junction Temperature <sup>[1]</sup>	135 °C
Operating Case Temperature at Test Current <sup>[1]</sup>	-40 to 120 °C
LED Storage Temperature	-40 to 120 °C
Soldering Temperature	JEDEC 020E 260 °C
Allowable Reflow Cycles	3
Minimum ESD Sensitivity <sup>[2]</sup>	±3 kV HBM

## Designing with LUXEON Versat 2020 140 AM

Flux bins supportable for car programs depend on product color and program start-of-production and end-of-production dates. Flux roadmaps by year and product color are maintained and available from the sales representative. Please contact a local sales representative to request the flux bin range with best supportability for program timing.

## Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheets. For this reason, Lumileds bins the LED components for luminous flux or radiometric power, color point, peak or dominant wavelength and forward voltage.

LUXEON Versat 2020 140 AM LEDs are labeled using a 3-digit alphanumeric CAT code following the format below:

**A B C**

Where:

- A** – designates luminous flux bin (example: J = 15 lumens to 18 lumens)
- B** – designates color code (example: 0 = 584 nm to 588 nm)
- C** – designates forward voltage bin (example: A = 2.35 V to 2.50 V)

Therefore, a LUXEON Versat 2020 140 AM with a lumen range of 15 to 18, color code of 0 and a forward voltage of 2.35 to 2.50 has the following CAT code:

**J 0 D**

## Luminous Flux Bins

Table 6 lists the standard luminous flux bins for LUXEON Versat 2020 140 AM emitters. Product availability in a particular bin varies by color and platform start-of-production date. Contact your local sales representative for best supportability of programs.
