General Product Information

Product Test Conditions

SignalSure 75 LEDs are tested and binned using a 20 ms monopulse (MP) at 75 mA drive current, junction temperature, T_j, of 25 ºC.

Part Number Nomenclature

Part numbers for SignalSure 75 follow the convention below:

A 1 D P – **B C C C** L 1 7 **E F G H** 0 0

Where:

- **B** – designates color (A = Amber)
- **C C C** – designates minimum dominant wavelength (588 = 588 nm, 584 = 584 nm)
- **E** – designates minimum flux bin (See Product Bin and Labeling section)
- **F** – designates flux bin range (3 = 3 subsequent flux bins including the minimum bin)
- **G H** – designates forward voltage range in which G is the minimum V_f bin and H is the maximum V_f bin (See Product Bin and Labeling Definitions section)

Therefore, the following part number is used for a SignalSure 75 Amber, 584 nm minimum wavelength, single binned at 75 mA, luminous flux range of 7.3 lumens to 12.5 lumens and forward voltage range of 2.07 volts to 2.67 volts:

A 1 D P – **A 5 8 4** L **1** 7 **E 3 A E** 0 0

PARAMETER	PERFORMANCE
Minimum DC Forward Current	5mA
Maximum DC Forward Current	90mA
Maximum Junction Temperature [1]	135°C
Operating Case Temperature at Test Current [1]	-40°C to 115°C
Operating Case Temperature at Maximum Current [1]	-40°C to 115°C

Product Bin and Labeling Definitions

Designing with SignalSure

Flux bins supportable for car programs depend on product color and program start- and end-of-production date. Flux roadmaps by year and product color are maintained and available from the sales representative. Please contact your local sales representative to request the flux bin range with best supportability for program timing.

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheets. For this reason, Lumileds bins the LED components for luminous flux, color and forward voltage.

SignalSure 75 single binned LEDs are labeled using a 3-digit alphanumeric (default) or 4-digit alphanumeric (split flux bin) CAT code following the format below:

A B C or **A A B C** (split flux bin)

A/AA – designates luminous flux bin at 75 mA (example: E = 7.3 lumens to 8.7 lumens)

B – designates color code (example: 0 = 548 nm to 588 nm)

C – designates forward voltage bin at 75 mA (example: B = 2.19 V to 2.31 V)

Therefore, a SignalSure 75 AM with a lumen range of 7.3 to 8.7, color code of 0, and a forward voltage of 2.19 to 2.31 has the following CAT code:

E 0 B

A SignalSure 75 AM with a lumen range of 7.3 to 8.0, color code of 0, and a forward voltage of 2.19 to 2.31 has the following CAT code:

E 1 0 B
