General Product Information

Product Test Conditions

LUXEON Rebel LEDs for automotive are tested and binned using a 20ms monopulse (MP) at 350mA drive current, case temperature, T_c , of 25°C.

Part Number Nomenclature

Part numbers for LUXEON Rebel follow the convention below:

L X M A – **A B** 0 3 – **C D E F**

Where:

- A** – designates radiation pattern (P=Lambertian)
- B** – designates color variant (H=Red Orange, S=Super Red)
- C D** – reserved for future product offerings
- E F** – designates minimum flux performance for standard parts or customer specific code for customized part number

Therefore, the following part number is used for a LUXEON Rebel Red Orange, 80 lumens minimum flux:

L X M A – **P H** 0 3 – **0 0 8 0**

Environmental Compliance

Lumileds LLC is committed to providing environmentally friendly products to the solid-state lighting market. LUXEON Rebel is compliant to the European Union directives on the restriction of hazardous substances in electronic equipment, namely the RoHS Directive 2011/65/EU and REACH Regulation (EC) 1907/2006. Lumileds LLC will not intentionally add the following restricted materials to its products: lead, mercury, cadmium, hexavalent chromium, polybrominated biphenyls (PBB) or polybrominated diphenyl ethers (PBDE).

Notes for Table 2:

1. Total angle at which 90% of total luminous flux is captured.
2. Viewing angle is the off axis angle from the LED centerline where the luminous intensity is 1/2 of the peak value.

PARAMETER	PERFORMANCE
Minimum DC Forward Current	50mA
Maximum DC Forward Current	1.2A
Maximum Junction Temperature ^[1]	150°C
Operating Case Temperature at Test Current ^[1]	-40°C to 130°C

Minimum ESD performance ^[2]	8kV HBM, 400V MM
Reverse Voltage (V _r)	LUXEON Rebel LEDs are not designed to be driven in reverse bias

Notes for Table 4:

- 1. Proper current derating must be observed to maintain junction temperature below the maximum, so that the LED is maintained below the maximum rated operating case temperature. LUXEON Rebel LEDs driven at or above the maximum rated operating case temperature may have shorter lifetime.
- 2. Measured using human body model (per ANSI/ESDA/JEDEC JS-001-2010) and charged device model (per JEDEC22-C101F).

Product Bin and Labeling Definitions

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheets. For this reason, Lumileds bins the LED components for luminous flux, color and forward voltage.

LUXEON Rebel LEDs for automotive are labeled using a 3-digit alphanumeric CAT code following the format below:

A B C

- A** – designates luminous flux bin (example: L=80 lumens to 90 lumens)
- B** – designates color code (example: 5=632nm to 638nm)
- C** – designates forward voltage bin (example: W=2.00V to 2.20V)

Luminous Flux Bins

Table 5 lists the standard photometric luminous flux bins for LUXEON Rebel LEDs for automotive. Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all colors.
