Product Bin and Labeling Definitions

Designing with LUXEON Altilon TopContact 1x5L

Flux bins supportable for car programs depend on product color and program start- and end-of-production date. Flux roadmaps by year and product color are maintained and available from the sales representative. Please contact a local sales representative to request the flux bin range with best supportability for program timing.

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheets. For this reason, Lumileds bins the LED components for luminous flux, color and forward voltage.

LUXEON Altilon TopContact 1x5L LEDs are labeled using a 4-digit alphanumeric CAT code following the format below:

A B C D

Where:

A – designates luminous flux bin (example: K=320 to 330 lumens) per die

B C – designates color bin (example: HC)

D – designates forward voltage bin (example: B=16.0V to 17.50V)

Therefore, a LUXEON Altilon TopContact 1x5L with a lumen range of 1600 to 1650, color bin of HC, and a forward voltage range of 16.0V to 17.50V has the following CAT code:

K H C B

Luminous Flux Bins

Table 6 lists the standard luminous flux bins for LUXEON Altilon TopContact emitters. To obtain the flux of the product this number needs to be multiplied with the chip count. Product availability in a particular bin varies by color and platform start-of-production date. Contact your local sales representative for best supportability of programs.
