General Product Information

Product Test Conditions

LUXEON SunPlus 2835 Line LEDs are tested and binned with a DC drive current of 120mA at a junction temperature, T_j , of 25°C.

Part Number Nomenclature

Part numbers for LUXEON SunPlus 2835 Line follow the convention below:

L 1 S P – **A A A B B 0 C C 0 0 0 0 0**

Where:

- A A A** – designates color (FRD=Far Red, DRD=Deep Red, PRP=Purple, RYL=Royal Blue, LME=Lime and PNK=Horticultural White)
- B B** – designates typical percentage of PPF in the blue spectrum (420 to 480nm) vs. the total PPF in the Photosynthetic Active Radiation (PAR) region (400 to 700nm), which applies only to purple LEDs (00=2.5%, 10=12.5% and 20=25%)
- C C** – designates package size (28=2835)

Therefore, the following part number is used for a LUXEON SunPlus 2835 Royal Blue:

L 1 S P – **R Y L 0 0 0 2 8 0 0 0 0 0**

Notes for Table 4:

1. Proper current derating must be observed to maintain the junction temperature below the maximum allowable junction temperature.
2. Residual periodic variations due to power conversion from alternating current (AC) to direct current (DC), also called "ripple," with frequencies ≥100Hz and amplitude of ≤15% of the maximum allowable DC forward current are acceptable, assuming the average current throughout each cycle does not exceed the maximum allowable DC forward current at the corresponding maximum junction temperature.
3. Pulsed operation with a peak drive current equal to the stated peak pulsed forward current is acceptable if the pulse-on time is ≤5ms per cycle and the duty cycle is ≤50%.
4. Transient reverse voltages and surge currents due to electrical switching or supply interruptions are acceptable if these events do not last for more than 10ms, the amplitude of the reverse voltage does not exceed 5V and the reverse current is less than 220uA.
5. Max 5V reverse for up to 10s is an acceptable beginning of life, one time test condition.

Product Bin and Labeling Definitions

Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheet. For this reason, Lumileds bins LED components for luminous flux or radiometric power, color point, peak or dominant wavelength and forward voltage.

All emitters packaged within a reel are of the same bin combination.

LUXEON SunPlus 2835 Line LEDs are labeled using a 4-digit alphanumeric CAT code following the format below:

A B B C

Where:

- A** – designates PPF bin (example: J= 0.7 to 0.75 $\mu\text{mol/s}$, K= 0.75 to 0.80 $\mu\text{mol/s}$)
- B B** – designates color or peak wavelength bin (example: 10=720 to 740nm)
- C** – designates forward voltage bin (example: B=1.8 to 2.0V, C=2.0 to 2.2V)

Therefore, LUXEON SunPlus 2835 Far Red with a PPF range of 0.55 to 0.60 $\mu\text{mol/s}$, peak wavelength of 720 to 740nm and a forward voltage range of 1.80 to 2.0V has the following CAT code:

F 1 0 B
